SUMMARY

Software Engineer with 4+ years of experience in software development, AI tools, and cloud-native solutions. Skilled in Python, Java, AWS, and full-stack frameworks like React and Spring Boot. Proven ability to own the full product lifecycle, from MVP ideation to scaling in production. Passionate about building scalable, high-performance systems and leveraging AI/ML to solve real-world problems. Thrives in agile environments with strong cross-functional collaboration. Committed to fast shipping, continuous user feedback loops, and building with empathy. Open to relocate

SKILLS

Python | Java | TypeScript | CSS | HTML | C++ | React | Node.js | GitLab | Git | Jira | Redis | Google Cloud Platform (GCP) | Amazon Web Services (AWS) | SQL | MongoDB | NoSQL | Nest.js | PostgreSQL | Spring Boot | Pandas | Unit Testing | Flask | Jenkins | Django | Mockito | REST API | Microservices | Docker | Kubernetes | Terraform | APIs | Data Analytics | Redux | Next.js

WORK EXPERIENCE

Full Stack Engineer – Alphadroid (Los Angeles, USA)

May 2025 – Present

- Built a multilingual, voice-assisted platform using React, Python, and ChatGPT to streamline patient registration and hotel operations, reducing intake time by 30%, increasing form completion rates by 40%, and enhancing accessibility for diverse users.
- Automated CI/CD pipelines with GitHub Actions for multilingual AI apps, cutting deployment time 40%.
- Designed scalable APIs using TypeScript and implemented data storage using PostgreSQL and MongoDB for structured, real-time updates. Developed authentication and integrated OpenAI Multi-Function Calling to automate complex backend workflows.

Software Engineer II – AI.Rawat (Chicago, USA)

Aug 2024 – May 2025

- Real-time Online Sales Analytics Dashboard - Built a real-time sales analytics platform integrating data from 5 e-commerce platforms into a unified dashboard, showing sales trends and inventory needs. Cut stock-out risks 25% and improved inventory turnover 15%.
- Owned backend development lifecycle from requirements to deployment in a fast-paced environment, iterating with cross-functional teams while mentoring 3 junior engineers in distributed systems and delivering production-ready APIs.
- AI-Driven Workflows for Moodle LMS - Architected AI-driven workflows in Moodle LMS, adding a RAG chatbot for admin-teacher-student collaboration and automated performance reporting. Improved academic outcomes 20% and feedback quality 30%.

Java Teaching Assistant - Illinois Institute of Technology (Chicago, USA)

Sept 2023 – May 2024

- Facilitated Java sessions for over 100+ students, managing classroom logistics to ensure smooth, project-based learning experiences with targeted individualized support.
- Used Excel and Power BI to analyze engagement data, tailoring support strategies and boosting effectiveness by 25%.

Associate Software Engineer - S&P Global (New Delhi, India)

Jul 2019 – Dec 2022

- Part of a cross-functional team of 20+ to develop a scalable New Pricing Platform and Reference Data. Participated in on-call rotations, diagnosing and resolving production incidents, ensuring 99.9% service uptime.
- Accelerated development, end-to-end and debugging efforts using Java, Test Driven Development (TDD) principles and unit testing, aligning with business values and requirements, and integrating new features, resulting in a 50% performance boost in the existing product.
- Developed Python and Java-based backend systems and 100+ RESTful APIs to manage financial data records (1M+ records), enabling improved data integrity in high-volume market environments. Boosted revenue while reducing maintenance costs by 40%.
- Engineered ETL pipelines using Python, AWS Lambda, and Kinesis to process 1M+ financial records daily. Optimized for cost (-15%) and reliability, ensuring accurate data feeds for enterprise analytics and reporting. Integrated SQS for async event-driven processing and contributed across the full SDLC.

Projects

Resume Tracker – Serverless Web Application

- Technologies** – Python, Flask, AWS Lambda, DynamoDB, API Gateway, S3 and SES
 - Designed and developed a serverless backend system to track job applications, integrating RESTful APIs with DynamoDB for CRUD operations. Used S3 to store resumes and cover letters, with SES and CloudWatch for weekly follow-up email alerts.

The Movie Review – Android Application

- Technologies** – Java, Kotlin, TMDB and OMDb APIs, Firebase, YouTube Web API and SQLite
 - Implemented TMDB and OMDb APIs to manage 10,000+ movie entries and integrated YouTube trailers. Added a favorites feature, boosting user retention by 25%. Managed user authentication with Firebase for 500+ users and enabled offline data access with SQLite.

AI Job Application Tracker

- Technologies** – Python, OpenAI API, Gmail API, PostgreSQL and Pandas
 - Automated job tracking by parsing 200+ Gmail applications with AI, leveraging Gmail API + OpenAI, capturing key insights like roles and statuses, and cutting manual tracking time by 80%.

Pharmacy Management System – Desktop and Web Application

- Technologies** – Java, PostgreSQL, JSP, Maven, JavaScript and React
 - Designed and implemented RESTful APIs for authentication and role-based access, built interactive React-based UI with real-time filtering and form validation, connected it with serverless REST APIs, and collaborated on frontend state management and faceted search—improving response time by 30%, backend performance by 40% (Java/PostgreSQL), and reducing downtime by 20%.

EDUCATION

ILLINOIS INSTITUTE OF TECHNOLOGY – (CHICAGO, USA)

Masters in Information Technology and Management

2024

GPA: 4.0/4.0
